# *Web Programming I (420-H11-HR)*
# *Web Assignment 2 – Mobile Design*

| | |
|---|---|
| Date assigned: | Wednesday, October 14th, 2026 |
| Date due: | **Monday, November 9th, 2026 @ 11:59PM** |

**Learning Objectives**

Upon successful completion of this assignment, the student will be able to:

- Design for mobile and responsive web design

**To do:**

1. Clone the Classroom 50 assignment to your OneDrive:**\420-H11\Assignments** folder.

2. Inside the cloned repository folder, create a folder named **LastNameFirstName_H11A02** (mine would be **ScottTalibTaz_H11A02**). **Copy all files and folders for the website developed in the last assignment into this folder** (the design plan is not necessary).

**Part 1 – Mobile Design**

**NOTE: YOU CANNOT USE ANY EXTERNAL LIBRARIES FOR THIS ASSIGNMENT.**

1. Design the mobile site for your website. This will be the site used when the screen is less than 768px wide (breakpoint of 768px). This means **only one media query** is required for the purposes of this assignment. You only need to do the complete design for this size of screen and smaller. Your site should look good between 350px and 768px. *Make use of the responsive tab in the dev tools!*

2. You'll only need to focus on **four key pages** for this assignment. You should include links for all pages***** in your website's navigation. For mobile users, you have the flexibility to display only the most important pages in the top navigation menu. However, your bottom navigation should include **all links**, regardless of whether your users are on a mobile device or a desktop computer. For the desktop display, you'll need to show all the links in the top navigation as well.

   ** Refer to Assignment #1 to see the required pages. Note: many of you will likely end up with more in the final assignment.*

**Part 2 – Setup**

1. Each page must have the same look/feel. For each, include at least one of each element (header, nav, main, footer) with only the main content changing from page to page.

2. Set up the page you created in the last assignment to use semantic elements like nav, header, main, footer, etc. If you did not in the last assignment, you must change your navigation to a list and use list-style properties and/or display:xxx properties.

3. Set up your website to have a favicon, make sure it displays for all pages.

4. Create three other pages that will be used on this version of your mobile site. All your pages should be using the same core CSS file and have the exact same navigation. If you do have separate CSS files, they should only contain unique CSS, do not repeat CSS across files.

5. Don't be afraid to use comments in your HTML and CSS! You have one more assignment after this one, CSS can quickly become unwieldy. It sometimes makes it easier to comment on what sections you are using specific CSS for and to follow the flow of the page in your CSS.

**Part 3 – Content**

1. On your website's Home page, add content in a paragraph that describes: the name and major service of your company, the location, some history, service again in more detail, a summary. *Be sure to check for grammar errors and spelling mistakes!*

   Here's a possible idea for content:

   **[My company]** provides this [service/value/thing]. [Located/nestled/hidden] in beautiful [someplace, somewhere] just minutes from [somewhere else]. Since [1753], our [cool thing] facility offers a [expanded description of service/value]. Our aim is to do [a bunch of neat things] that you'll love.

   From previous years:

   **Puppy Spa & Play** provides premium grooming and daycare services for your beloved pets. Located in the heart of Ottawa, just minutes away from the ByWard Market, our little but charming facility has been a fan favourite for pet owners since 1983. Featuring expert grooming sessions and engaging playtime, we aim to keep your pets looking their best and feeling happy. Look no further than the very best for your furry friend!

**Tempo Music** is an exceptional music school located only minutes away from downtown Ottawa, that teaches a wide variety of instruments and activities. Since 1969, we've helped kids from the age of 5 to adults the age of 80 learn how to play Piano, guitar, Violin, how to sing, write songs, read sheet music, and many many more! Our Goal is to provide an excellent learning environment for anyone who wants to explore their passion for music and improve on their skills.

**Dreaming Spectrum** is a well-known company built to meet your every need. We deliver a high-quality service, designed for the elite of today's society. Indulge in a unique travel experience and relax in one of our main destination points. We offer a wide selection of planets to travel to within our beautiful Milky Way. For generations, we have been working on this project so that everyone can now experience the wonders of space. Our highly secure shuttle will make the flight experience ideal for everyone. Our personnel will take care of the safety of everyone during the trip. During the final week of your journey, we will open the cryopods, making each passenger capable of observing our marvelous Milky Way.

2. Add **two** images to the content of your home page. They must be appropriate and relevant to your business. Make at least one of them float to the right of the paragraph (float will be covered in a coming lecture). Remember, you are designing for **mobile first** and it is a best practice to have one column. **Include image sources in the footer.**

3. Add content to the other three pages that will be available for the mobile site. This must be relevant content to the site. Follow the principles of good design to make sure your text is formatted properly and has good contrast and design. Use the appropriate semantic elements where applicable.

As always, use good writing practices such as avoiding long blocks of text, using headings and sub-headings, and keeping paragraphs short. *Check your spelling!*

Eventually, you will need at least two tables on your website (one for costs and another for business hours), but this is not a requirement for this assignment. Be aware that you may have to adjust the layout of one of the pages to include a table for Assignment 3.

4. There are points for using at least 5 advanced **CSS** techniques listed below. Things considered advanced for this assignment include, but are not limited to:

- Custom properties
- pseudo-classes (remember, you cannot have hover on mobile)
- pseudo-elements
- calc(), gradients, filter(), transform, clamp()
- Container queries
- Flex
- Grid

- Good use of combinators (not including descendant combinators)
- Position for accent elements or images
- CSS Nesting

If CSS properties are misused or employed simplistically, they will not be taken into consideration. Using the same thing more than once only counts as one. You may comment on your code where you're using advanced CSS.

**Part 4 – Web Deployment**

1. Deploy your website to **GitHub Pages**. In a later lecture, I will go over this with you.
2. Test your website on your phone.
3. In your submitted assignment, include in the README.md a link to your deployed website.

**There is No Such Thing as a Small Part!**

1. Make sure that you do not have any embedded or inline styles on any of your pages. All styles MUST be in an external stylesheet.
2. At this point, the design of your site should be pretty much set with only minor tweaking. There should be no more massive design changes. The content may change, and even how it is displayed, but the design should be stable.
3. Test your pages on Firefox and Chrome. Use the responsive tab in the design tools.
4. **Validate all your HTML, CSS, and contrast. You should only have errors if you are using container queries.**
5. All images must be sourced in the footer, if you took the images, you must source each! Be specific with your sources (i.e. a source for each image).
6. AI generators may only be used for your logo or pictures of your products. You may not use them for anything else. You must source the AI generator used.
7. Ask your instructor for links to sites containing free images/icons.
8. Format your code using the auto-formatter.

**To submit**

Submit it to Classroom 50 by executing the same terminal commands as you do each lab. **Remember to verify both your GitHub repository and Classroom 50 to ensure your submission has been pushed correctly.**

**You should be regularly committing changes** (a good guideline is for every feature you finish you should have a separate commit). There are marks for good source control etiquette – this means making **smaller, atomic commits** with **descriptive messages**.
